

## A PATENTED OVERHEAD GRADER SYSTEM

SECTOR

Poultry

Meat

### ▲ A patented overhead grader system

Vendée Concept patented its **overhead grader** system. The hook system allows the overhead product conveying and a **better precision** at weighing.

The **patented hook overhead grader** lets free space on the floor thanks to its ceiling-mounted overhead conveyors.

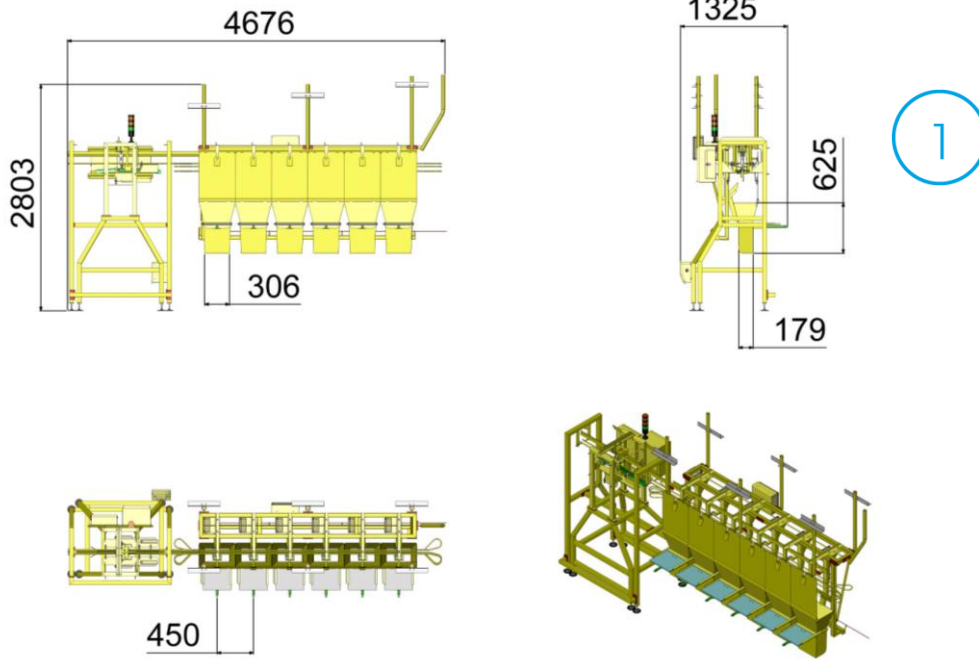

As a consequence this overhead system optimizes your work areas. The CALIBRA LA HOOK is best suited to fresh products, like poultry, whether cut or whole. The homologation of the CALIBRA LA HOOKS insures an 5g/01b 0.18oz echelon, in **conformity with the IPFA class Y(a) – (OIML R51) regulation**.

The photocells allow the presence of different varieties of products on one line detection, hence helping define the different types of products.

### ▲ Specifications

MODEL	Weighing pan capability	Up to 12,5 kg/ 27lb 8.92oz
	Weighing bridge	Automatic with strain gauge captor
	Output	Up to 9 000 products/hour
	Ejection type	Pneumatic unloading units.
	Equipment type	Hooks and trolleys
	Precision	Regulated version from Class Y(a) IFPA – OIML R51
	Steering	Control panel with 15" touch screen

**Overhead grader CALIBRA LA HOOKS 2474**  
Weighing bridge  
Unloading unit system 6 stations

## ▲ An insured productivity

The electronically controlled weighing bridge sorts the products by weight. Then the products are ejected thanks to pneumatic unloading units to guidance channels or buffer channels.

The guillotine trap equipped buffer channel controlled by pneumatic actuator allows the provisory product storage when the being filled crate weigh is fulfilled.

A luminous push-button allows the stored product liberation when the crate have been replaced. The supervision software offers a large panel of programs, insuring your production management.

## ▲ The Supervisor, efficiency and traceability

The association of the Supervisor Vendée Concept is the ideal complement to collect the data coming from our CALIBRA range.

This optional equipment, associates a traceability and storage management tool to the production management. The Supervisor is a real time production data recuperation tool. The whole of your production data is stored, collected and analyzed to allow you to optimize your global production. It collects and records all the weighing data linked to the labeling.

## ▲ Accessories exemples CALIBRA LA HOOKS

- ▶ Buffer or guidance channels
- ▶ Ubiquity access package
- ▶ Software Recup DC
- ▶ Pack Supervisor
- ▶ Management software CALIBRA TOPC
- ▶ Labeler with stainless steel box
